(C) safespring

The preferred cloud platform for research and education

We at Safespring have a long history of delivering cloud infrastructure services to the research and education market. Our platform enables open standards, GDPR compliance and is letting you maintain digital sovereignty.

Safespring's data centers are directly connected to the NREN Network in order to give you the best performance, without data transfer costs. Our data centers are powered by 100% renewable energy.

We are delighted to have qualified for this framework agreement that let us support the research and education community with our modern, API based services that support federated login to enable single sign-on. Safespring's services are trusted by more than 60 universities, institutions and research platforms and we're hoping to be part of your digital future as well.
