Setcor (Previously itSoft) for more than 30 years has been cooperating with all the world's leading ICT companies, and we provide our clients with telecommunications and Cloud services, as well as complex network and security solutions.

The main focus of Setcor is to provide customers with solutions that will reduce the unnecessary loss of large amounts of money and human resources in an attempt to manage their ICT needs. Instead of focusing on solving ICT problems, our goal is for companies to focus on strengthening their market position, leaving it to us to manage and maintain the ICT infrastructure.

Setcor cloud are our latest ICT solutions that move the entire business to the user in the Cloud. Everything is perfectly adapted to the user's business needs and has access to the system via the network, anytime and anywhere with unlimited amounts of all resources (hard drive, processor, memory and more).

Our solutions help our customers to modernize their entire ICT infrastructure without investing in their own equipment, raising their value and enabling them to be fully digitally transformed that is necessary for every company that wants to operate in a transparent and competitive way.

Setcor Services:
- Cloud
- Collocation
- Telco
